

including at least one auxiliary interface that supports communication between the digital video recorder and the set-top box, the digital video recorder comprising:

at least one recorder interface connectable to the auxiliary interface;

a storage device;

A1
cancel
a microprocessor configured to control the digital video recorder and the set-top box, the microprocessor comprising an electronic program guide subsystem connected to the recorder interface to receive the electronic program guide information from the set-top box and to process the electronic program guide information to schedule recording the broadcast audiovisual data on the storage device; and

a video output interface separate from the recorder interface, the video output interface connectable to a display device.

A2
19. (Amended) A digital video recorder connectable to a set-top box configured to receive electronic program guide information, the set-top box including at least one auxiliary interface that supports communication between the digital video recorder and the set-top box, the digital video recorder comprising:

at least one device interface connectable to the auxiliary interface;

a microprocessor configured to control the digital video recorder and the set-top box, the microprocessor comprising an electronic program guide subsystem connected to the device interface to receive and process the electronic program guide information from the set-top box; and

a video output interface separate from the device interface, the video output interface connectable to a display device.
